SUMMARY

Android/Mobile-focused CS sophomore (SRMU, Lucknow) currently interning as an Android Developer at Beans.ai, where I ship production features and resolve critical stability issues in Kotlin/Android. Also experienced in Flutter/Dart cross-platform development and backend systems (Go, Java, Python), with hands-on work in AI-powered tools, CLI systems, and interpreter engines. Sitare Foundation Merit Scholar.

TECHNICAL SKILLS

Languages: Go, Java, Python, C, Kotlin, Dart

Mobile & Android: Kotlin, Android SDK (XML/View-based), Jetpack Compose, Flutter, Firebase (Crashlytics)

Backend & APIs: Fast API, Flask, REST APIs, TCP Sockets, Concurrency (Coroutines)

Databases: MySQL, MongoDB, Redis (basics)

AI / Data: NLP, Transformer Models, Scikit-learn, Pandas, NumPy

Tools & DevOps: Git, GitHub, Docker, Linux, VS Code

EXPERIENCE

Android Developer Intern — [Beans.ai](#)

May 2026 – Present

- Built BeansLite from scratch — a streamlined version of the core Android app — shipping 2-3 user-facing features end-to-end from design to production, including font size customization and button color personalization.
- Implemented settings functionality via POST API integration, enabling configurable in-app preferences.
- Debugged and resolved critical production issues surfaced via Firebase Crashlytics (ANR, OOM, and NullPointerException crashes), improving the app's crash-free user rate to 99%.

PROJECTS

P2PShare CLI — Serverless Peer-to-Peer File Transfer (Go)

Go • TCP Sockets • AES Encryption • Goroutines

[\[GitHub\]](#)

- Built a serverless P2P file transfer CLI using raw TCP sockets with chunked streaming — enables direct machine-to-machine transfer with no intermediate server.
- Implemented AES-encrypted chunk transmission, SHA-256 integrity verification, resumable transfers, and real-time progress tracking via concurrent goroutine pipelines.
- Why it matters: Demonstrates low-level networking, cryptography, and Go concurrency — rare for a sophomore-level project.

BLOOP Interpreter — Custom Scripting Language (Java)

Java • Compiler Design • Recursive Descent Parsing

[\[GitHub\]](#)

- Designed and built a custom scripting language interpreter from scratch in Java — includes full tokenizer, recursive-descent parser, and execution engine.
- Implemented expression trees, variable scoping, and control flow (if/loop); validated with 100+ test cases via CLI.

ResumeMatch — Semantic Resume-Job Matching System (Python)

Python • Flask • NLP • Transformer Models

[\[GitHub\]](#)

- Built an end-to-end resume-job matching system using Flask and transformer-based NLP — performs semantic skill-gap analysis and generates personalized job recommendations.
- Achieved ~85% matching accuracy using embedding-based semantic search; automated resume parsing to eliminate manual screening effort.

EDUCATION

B.Tech, Computer Science — SRMU, Lucknow

Expected May 2028

CGPA: 7.72 | Relevant: DSA, OOP, AI, DBMS, Python, Java

Intermediate (Science) — R.M.S High School

May 2023

Percentage: 80%

Matriculation — R.M.S High School

May 2021

Percentage: 92%

SCHOLARSHIPS & AWARDS

Sitare Foundation — B.Tech CS Scholarship

Aug 2025 – Present

Merit scholarship covering full B.Tech degree; awarded to high-potential CS students across India.

Top Neurons Scholarship

Oct 2021 – May 2023

Competitive JEE academic scholarship awarded for outstanding performance.
